- When CS2 first came out, we all believe that AI would detect hackers eventually. Hopefully, one day, as this billion dollar company invest in a legit anti-hack. I hope they solve it and not let this game die like TF2. Especially as this game was a staple of my childhood and now that i'm an adult with a decent salary. I "invested" a good amount of money on skins and would like to enjoy playing this game knowing that the integrity of the game is solid. Only to wish one day, that dream will come true. As of now, i get discouraged to play as my ELO is suffering. I live in Asia and playing with Chinese players and Russians, i feel more games are suspicious and refuse to play until they fix this problem. Every now and then, when i get the itch, i will play one or two games.
- Most of my life has been dedicated to the TF2 community rather than Counter-Strike's, i do have a great experience when it comes to enduring constant botting and cheating for the entirety of a match, although TF2's cheating had a bigger amount of cheater's per game since games are 12v12, a single cheater in CS2 disrupts a game louder than TF2's, due to Counter-strike's single life per round and how greatly it affects having one less teammate in a team even if the chicken is kicked, its not the same a 11v12 than a 4v5
- I dont think the cheating problem is quite as bad as everyone says, but maybe it's just because I'm low elo. However, even at my elo people are always accusing of hacks. In my experience it's rare to see someone blatantly cheating. But I think people are more likely to accuse because the current anti-cheat doesn't do enough.
- If you start to actually train a ML model, make it open source as part of your thesis. There are probably a lot of AI researches in the CS community willing to participate in development. Maybe a community project can actually change something for the better
- Question about amount of cheaters in my games wasn't easy to answer as it obviously wasn't 0, but 50% was excessive, so data isn't that useful for you guys. Also what server played on. I'm in Oceana so cheating may be different to Europe/NA etc
- No, don't use this survey to improve your cheat detection avoidance. Cheating are for VAC banners. Don't lose skin to win.
- Cheating is morally okay against people without prime these poorons don't deserve to play a fair game for free XD
- I only used cheats in csgo due to being a child, but in the end it made me a better player even years later.
- GL on the master thesis. Sounds like a super interesting topic and would love to read the finished product.

- thanks for doing this do you care showing the result of the survey ? maybe contact me by my email !
- Please figure this shit out as the game is dying and is only going to get worse.
- Thank you for what you are doing. Wish you the best for your master's thesis !
- Thanks for covering this topic, hopefully it comes with a meaningful outcome.
- Fun how you're doing a project on CS, good luck with your research! :)
- Good luck with your thesis from a highschool student in Germany ;)
- I am open for more question if you wish, patriksarin@gmail.com
- Smurfing is likely just as bad of a problem as other cheats.
- Good luck on the thesis, I hope I was able to help. :)
- Push Valve to do so;ething, send them your analysis
- Good luck with your research! 😃
- People can lie in these tests
- Good luck with your thesis
- Good luck with the Thesis!
- I want to stay anonymous
- Good luck!
- Good luck
- Bak 2 Go
- Nope
- no
